

Spot-on Color Measurement.

ColorDialog spectro.

Spies Hecker – simply closer.

Step by step to the perfect color.

With speed, simplicity and precision.

The success of a vehicle refinish depends first and foremost on color accuracy. In view of the over 45,000 OEM colours in existence worldwide and the roughly 600 new colors added each year, the refinisher is faced with a huge challenge. With the new **ColorDialog spectro** colorimeter, color searches become child's play. And so that the refinisher quickly obtains the right formula, we additionally recommend the software CRplus. Combined with digital scales, you have everything you need for immaculate refinishing results.

Step 1: Identify the color.

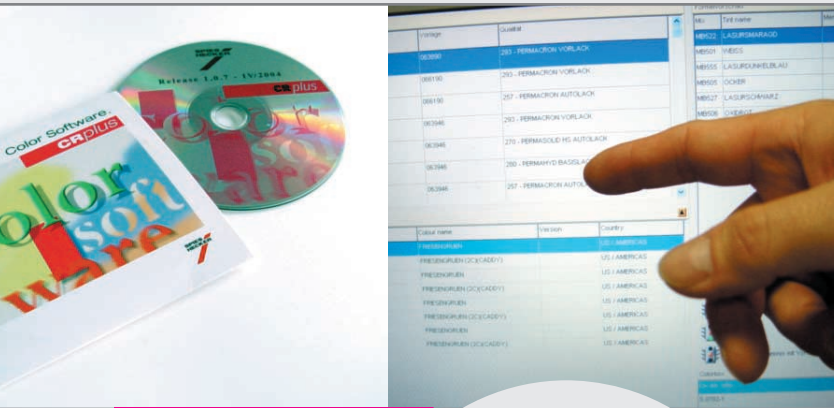

Electronic fingerprint in less than a minute!

*Super-quick and with total precision. By using the advanced **ColorDialog spectro** LED optical measuring device, any color – be it a solid-color or effect finish – can be identified in less than a minute. All you have to do is hold the **ColorDialog spectro** against the cleaned and polished vehicle body close to the damaged paintwork – and leave the rest to the instrument.*

The advantages at a glance.

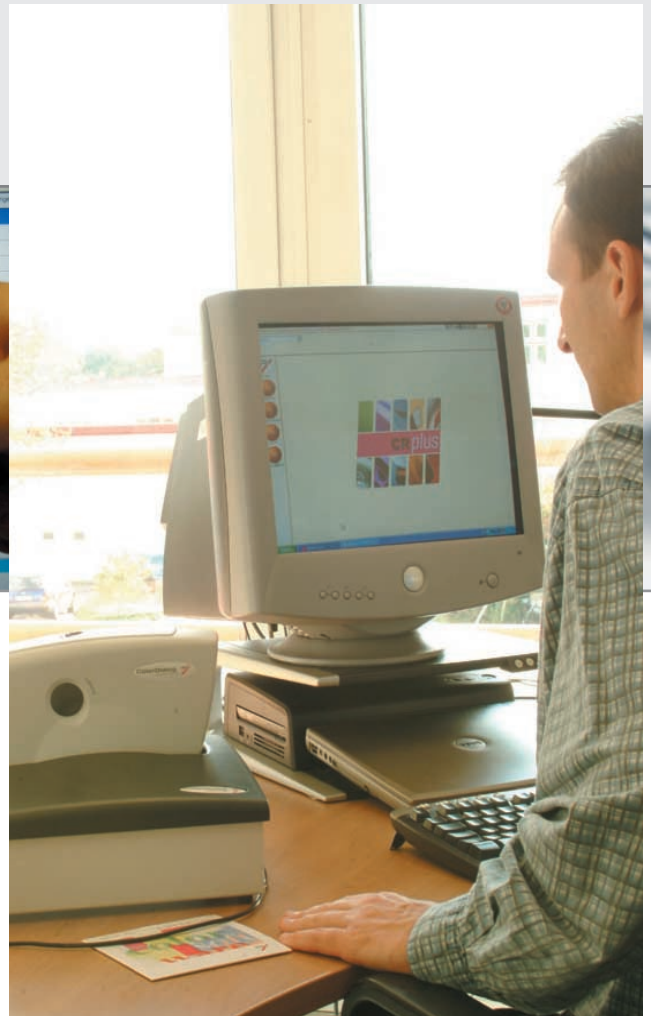

- Rapid, high-precision measurement even of unknown colors.
- Simple handling.
- Simple menu selection and guidance by scroll wheel.
- Straightforward English-language display.
- Operated with standard alkaline batteries.

Database of over 45,000 colors for all Spies Hecker paint series.

CRplus

2

Step 2:
Evaluate the colorimetric data and obtain the mixing formulae.

The Formula 1 of color identification.

Searching for certain mixing formulae can take quite some time. With the CRplus formula search software, on the other hand, the process is quick, simple and precise.

CRplus – the essential addition for any paintshop.

CRplus – the essential addition for any paintshop. The colorimetric data from the **ColorDialog spectro** are read into the PC. All you have to do is enter the manufacturer, model and color code. CRplus then supplies a matching mixing formula in a matter of seconds. If no definite mixing formula can be found, the system automatically calculates a correction formula adapted to the vehicle body.

The advantages at a glance.

- Over 45,000 colors retrievable by mouse-click.
- Easy-to-follow user interface.
- CRplus runs on any conventional PC or computer scales. System requirement: Windows 98 or higher.
- Create a customer database by entering your own mixing formulae or storing the measured formulae.
- Additional CRplus service: Technical data sheets, safety data sheets and color information.

Colors can be mixed quickly
and precisely with intelligent scales.

Step 3: Mix the color.

Complete system for exceptional accuracy.

*The ideal complement to **ColorDialog spectro** and **CRplus** is computer scales for mixing the measured formulae.*

Direct link.

Thanks to the link between the PC and **ColorDialog spectro**, the formulae calculated by **CRplus** are relayed to the digital scales – a highly convenient system.

The advantages at a glance.

- Precise color mixing.
- All the information available at a glance.
- Direct transmission of the measured formulae to the scales.
- Universal applications.

*Identifying colors quickly and
with extreme precision. With
ColorDialog spectro it couldn't
be simpler.*
