

Color Index Documentation.

Visual colour finding tools.

The Spies Hecker Color Index documentation is a big help in finding the exact colour.

Colour chips give you a complete overview of all OEM colours and their variants. They are in alphabetic order by car manufacturer (OEM) and colour code and are updated yearly. The flexible chips are painted with original Spies Hecker paint to facilitate finding the correct colour on the object to be repaired. The corresponding colour code is on the back of the chip.

In addition the Hi-TEC and add-on parts documentation (Color Index Specials) have barcodes on the back of the chip for easy scanning into CRplus.

Color Index swatches

Color Index Documentations...

for all colour mixing systems

Color Index Special (for accent colours)

More than 1.600 colors for add-on parts, interior and substrate

- Accent and interior colours
- 800 accent colors and roughly 900 interior colours
- Accent colours sorted according to manufacturer/code
- Interior colours sorted chromatically
- 1 shade per sheet (35x90 mm) with barcode
- Coated chips, not sprayed

Colour Swatch Permasolid SpectroFlex 5400.

Boot lid, bonnet or vehicle exterior – car makers often resort to pigmented surfacers. On the exterior, this pigmented material masks stone chipping. On interior surfaces at the front and rear, the coloured film of surfacer serves as a substitute for the top coat.

For this coloured surfacer system the bodyshop uses 6 basic colors (white, black, red, green, yellow and blue) to mix a variety of solid colors – quickly and efficiently. The precise mixing formulae and the Permasolid SpectroFlex 5400 colour fan with its 143 colour chips makes work much easier.

- Surfacer colours
- 143 sheets showing special surfacer colours with formula
- Coated chips, not original paint
- Sorted chromatically

for Permahyd Base Coat Series 280/285

Permahyd Color Index Variant (Series 280/285, waterborne colors)

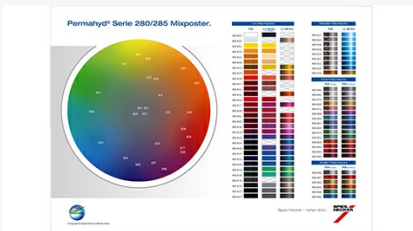

Over 5,500 colour chips, OEM colours and their variants are stored in a practical, dust-proof box that can be mounted on the wall. Containing colours and their variants of the automobile industry over the last 10 years. Every single colour chip is coated with original Spies Hecker Permahyd base coat and clear coat. The flexible colour chips make it easy to identify the original colour with great accuracy.

- Important colours of European and Asian car manufacturers with their variants
- From 1998
- 1 shade/variant per sheet (35x90 mm)
- Sprayed with original Permahyd material

Color Index Special (for accent colours)

More than 1.600 colours for add-on parts, interior and substrate

- Accent and interior colours
- 800 accent colours and roughly 900 interior colours
- Accent colours sorted according to manufacturer/code
- Interior colours sorted chromatically
- 1 shade per sheet (35x90 mm) with barcode
- Coated chips, not sprayed

Mixing Colour Poster Permahyd

- for Series 280/285
- Overview of Permahyd mixing colours
- Mixed with white and silver
- Identified by position in colour circle (solid colour and metallic)

for Permahyd Hi-TEC 480

Color Index Variant Hi-TEC

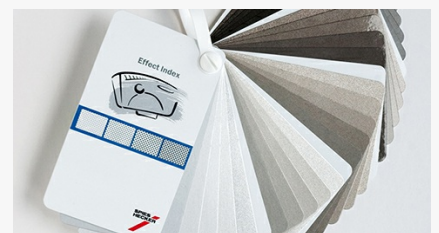

This metal cabinet contains over 6.000 colours from car manufacturers (OEM). Each chip is painted with original Hi-TEC paint. The reverse shows manufacturer's code, name, Chip ID and a barcode.

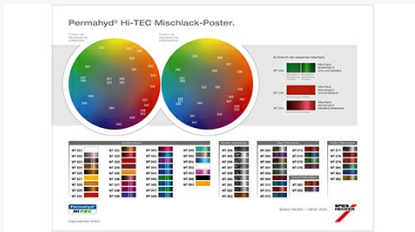

- Important colours of European and Asian car manufacturers with their variants
- Solid colours from 1998, effect colours from 2003
- 1 shade per sheet (35x90 mm) with barcode
- Sprayed with original Permahyd Hi-TEC material

Hi-TEC Effect Index

A huge variety of metallic effects are available for modern cars. Painters can easily identify the grade of coarseness and brightness with the chips of the Effect Index. Used in combination with the ColorDialog spectro – the result is a perfectly matched colour.

- 25 chips divided into 5 coarseness categories and into 5 lightness shades within each coarseness category
- Chip size 70 x 180 mm
- Sprayed with original Permahyd Hi-TEC material
- Use only in conjunction with ColorDialog spectro

Mixing Color Poster Hi-TEC

- for series 480
- Overview of 64 Hi-TEC mixing colours
- Mixed with white and silver
- Identified by position in colour circle (solid colour and metallic)

Mix Master Hi-TEC 1 - 3 2013

- Chip size 35x90 mm
- Sprayed with original Permahyd Hi-TEC material
- 3 separate color swatches "Mix Master 1-3"
(can be contained in Permahyd Hi-TEC Color Index Variant metal cabinet)
- Tint swatch 1: Solids, Display of masstone and different blends with white
- Barcode on back side

Barcode Reader

Saving time in the color mixing process is important. A quick scan of a colour's barcode, printed on the colour chip, is a short-cut to retrieving the right colour formula. This tool can be connected to the PC Systems ColorTint HD and Systems Attum.

for Permafleet and PercoTop

Spies Hecker RAL Colour Swatch

- Shows all RAL Classic colours
- 5 chips per sheet
- Sorted according to code
- Coated chips, not sprayed
