

Phoenix - The latest generation colour management software.

Weekly formula updates. Online formula database. Compatibility with the Acquire EFX and Acquire spectrophotometer. The innovative Phoenix colour software will open up new possibilities of digital colour management for refinishers.

The web-based software offers access to colour formulas regularly updated via the online Color Cloud database. Bodyshops who use Phoenix will also be able to store and to manage the refinish and colour formulas they use in their own internal bodyshop network.

With only one click, you enter our online colour formula search.

Here you can select the appropriate category, e. g. manufacturer, or you enter a colour code, a colour name or the six-digit Spies Hecker reference number in order to find the right colour.

The result will be a list with all variants for a certain colour code.

Then you select the colour, paint quality and quantity you need and in no time at all the correct mixing formula appears together with all necessary information.

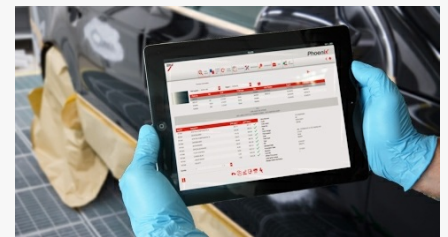

Additional features:

- Picture of OEM-colours on virtual colour chips (**Colour Show**)
- **Colour Guide** with information about color trends of new car models, type label position, most common variants (**Colour Tips**) etc.

Our new online colour retrieval site, Phoenix, is active for all Spies Hecker users. To get your desired colour result with outstanding accuracy and to protect your personal formulas, individual access is required.

Register here with your company email address. You can enter the full online version of Phoenix with your personal passcode as soon as your access is granted.
