

## Hi-TEC Performance System.

For higher throughput in the bodyshop.

Innovative paint products contribute to efficient work processes. The products of the Hi-TEC Performance System are perfectly adapted to each other and are easy to apply. Vehicle processing is accelerated by short application times, rapid drying and simple sanding of the materials.

**Hi-TEC  
Performance**

### A paint system for the highest standards **Permahyd Hi-TEC 480**

This base coat is known for its highly uniform effect formation and high color accuracy. Its innovative paint technology ensures rapid and reliable application. The paint is applied in a single spray operation without flash-off between coats. All this accelerates vehicle throughput.

### Perfectly adapted to modern drying methods

Computer-aided infrared dryers are being increasingly used in bodyshops and are employed in those areas where faster and more efficient vehicle throughput is required. The Hi-TEC Performance System is ideally suited to this new technology.

“

*Our painters find the process of blending-in very easy. The high number of available variants is positive and we can match the colour chips in more than 90 % of all cases. The colour panels I paint with HI-TEC now deviate considerably less from the sample panels of our painters.”*

Ludwig Bornemann, Head painter, Identica Brillant (Germany)
