

Our products

Permasolid® HS Speed Surfacer 5500.

High Speed Surfacer for higher throughput.

The new Permasolid Speed Surfacer 5500 significantly speeds up the preparation process, thanks to both its application method and the drying process. Air-drying time is significantly shorter compared to standard air-drying surfacers. This results in fast processing even without IR drying. Added to the speed is a smooth surface that helps to ensure excellent paint results.

- Simple 1:1 mixing ratio with Permasolid Speed Surfacer Hardener 3550.
- Excellent vertical stability.
- Time and energy savings thanks to very impressive air-drying performance.
- Other drying techniques can also be used: forced drying at different temperatures and IR drying.
- From Speed Repair to standard panel repair, in fact any type of job can be handled at the same time, thanks to air-drying.
- The smooth surface helps to ensure excellent gloss hold-out after top coating.
- Available in three colours: white, grey and black.
- **Use of Priomat Reactive Pretreatment Wipes 4000 is mandatory.**
