

## Speed Repair Training.

Spies Hecker believes bodyshops must be equipped to embrace small- to medium-area repair technique (SMART) repair opportunities in a competitive economy. Almost 30 per cent of all damage to vehicle body parts is minor and occurs on the lower areas of a vehicle. Complete panel re-sprays are generally too expensive for many vehicle owners and so damage is either left, or repairs are carried out by unqualified, cut-price operators. Spies Hecker offers its bodyshops the perfect solution with this Speed Repair course. Upon completion refinishers will be able to boost customer loyalty with lower repair costs and open up extra business opportunities with this cost-effective yet highly-skilled technique.

Speed Repairs require comprehensive training. The approach and methodology to this type of repair is different and brings a competitive advantage to bodyshops that can offer it. Paint technicians are shown how to achieve successful Speed Repair results with everyday products they have in stock. They are instructed in the use of the correct tools, surface preparation and in application techniques on exterior metal and plastic substrates.

With specialist information on the procedures and products required for Speed Repair, this course is invaluable for paint technicians who want to carry out SMART repairs confidently and efficiently.

---

**Duration:**

One day.

**Suitable for:**

Refinishers with some experience.

**Equipment:**

All equipment provided apart from safety footwear.
