Twin turbo for the workshop

Dual impetus for greater throughput: easy application and fast drying mean that the Spies Hecker speed products accelerate the painting process twice - during preparation and in the clearcoat finish. They offer evident benefits in other respects too.

A new technology for even more speed: Permasolid® HS Speed Surfacer 5500 and Permasolid® HS Speed Clear Coat 8800 set new workshop standards – especially when used in combination, because their benefits are complementary.

A filler with Formula 1 speed

Thanks to innovative technology, the Speed Surfacer 5500 impresses with its Formula 1-like speed when applied in up to 4 spray coats, with no flash-off times and with ultra-fast air drying, and surfaces can be sanded after just 20 minutes. Priomat 4000® Reactive Pretreatment Wipes can be used to prepare the bright metallic surfaces. They offer excellent adhesion and high corrosion protection. Application is quick and easy, flash-off times are shorter than the 2K wash primer by up to 25 minutes.

Unbeatable in the clearcoat team

Anyone starting with the filler and continuing with the Permahyd® Hi-TEC Base Coat 480, should finish with the Permasolid® HS Speed Clear Coat 8800. Based on the same innovative technology, the clearcoat requires just 10 to 15 minutes with a reduced booth temperature of 40 to 45°C. There is room for the next vehicle in no time at all. The clearcoat can also be polished after 90 minutes, even after air drying, without the need for additional energy. Using this combination of products can cut the entire painting process to under one hour.

Start out with first-class results.

Those using this speed filler and speed clearcoat benefit twofold: in terms of fast speeds and drying at low temperatures. They make the painting process particularly efficient: immediate benefits for the workshops include reduced downtimes, greater throughput and particularly low energy costs. But the results are also impressive: Permasolid® HS Speed Surfacer provides a very smooth surface, ensuring an excellent holdout. The clearcoat impresses with an outstanding appearance in terms of gloss and levelling. This puts the companies in pole position with all customers.
